

Project Initialization and Planning Phase

Date	15 JULY 2026
Team ID	SWUID2026214442
Project Title	Credit card approval and rejection system
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

Project Overview	
Objective	Accelerate Decisioning Time: Reduce the credit card application processing time from days to a matter of seconds through real-time automation.
Scope	User Registration & Application Interface: A secure digital portal/form where applicants submit their personal, professional, and financial
Problem Statement	
Description	The Credit Card Approval System is an intelligent, automated enterprise software solution designed to streamline and modernize the end-to-end credit card onboarding process. Instead of relying on slow, paper-based manual reviews, the system leverages a centralized digital engine powered by rule-based
Impact	. Drastic Reduction in Processing Time: Transforms a traditionally multi-day manual underwriting timeline into a near-instantaneous (under 10 seconds) automated response, meeting modern customer expectations

Proposed Solution	
Approach	The system will be built using an agile, modular, and API-first development strategy to ensure it integrates seamlessly with existing banking software while maintaining top-tier security standards.API-Driven Integration Strategy: The application will be designed around robust microservices. It will communicate with external identity verification (KYC) databases, national credit bureaus, and the bank’s internal core accounting infrastructure through secure RESTful APIs
Key Features	User & Application Portal (Frontend)Intelligent Digital Application Form: An intuitive, responsive web/mobile interface that adapts fields dynamically based on user inputs (e.g., altering fields if the applicant is salaried vs. self-employed).

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	T4 GPU
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	1 TB SSD
Software		
Frameworks	Python frameworks	Flask
Libraries	Additional libraries	scikit-learn, pandas, numpy, matplotlib, seaborn
Development Environment	IDE	Jupyter Notebook, pycharm

Data		
Data	Source, size, format	Kaggle dataset, 614, csv UCI dataset, 690, csv
